## THE chess clocks from Ruhla

Quality products from the Ruhla clock and watch works,  
one of the oldest clock and watch factories in Germany

**NEW**

### Digital electronic tournament chess clock

Both models offer :

- 20 games settings, programmable in FIDE / Fischer / Bronstein modes

### Basic digital electronic chess clock

### "Tournament" model

- Also fitted with mid-position button and extendable feet to improve the stability

and again with a top-quality wooden case, of course!

### "Basic" model

#### New features:

1. The program control enables fully variable programming of the clock after it leaves the factory. This in turn means that any program changes can be made without having to modify any circuits in the current production method. Such program changes have happened in the past (FIDE rule changes) and more can be expected in the future.
2. LCD displays with a viewing angle of 160° (where 100° to 120° is standard) are used in this clock, giving maximum readability from both sides. Each of the two game displays has a diameter of 65 mm, with the result that the thinking time can be shown in 30 mm high figures. The displays can therefore be easily read by both the players and the referee.
3. On the "Tournament" model the stability of the wooden case is markedly increased by extendable feet, allowing the clock face to be tilted back at an angle of 10° so as to improve the visibility from the players' positions.

The clock is supplied ready for use with two 1.5 V Mignon / AA batteries.

The life-span of new alkaline batteries is 2,000 hours of playing time.

The clock has "Low battery" and "Game end" displays, a buzzer with on/off switch and a move counter.

# The history of the Ruhla chess clocks

## 1951

The first chess clock  
(Kaliber 6) for the  
1952 International  
Festival in Berlin

## 1960

The tournament clock at the Chess Olympics in Leipzig

**1991** The new company takes its name from the chess clock,  
and the factory is re-opened and starts producing  
chess clocks again in 1995.
